Technical Skills

LANGUAGES

Kotlin, Java, TypeScript, PHP, JavaScript

ANDROID & CROSS-PLATFORM

Android Studio, SDK, React Native, Material Design, MVVM, MVC

WEB & INTEGRATIONS

PHP, MySQL, REST APIs, Bootstrap, jQuery, Razorpay, CCAvenue, Shiprocket

AI TOOLS

Claude, ChatGPT, Gemini

DATABASE

Room DB, SQLite, Firebase, SharedPreferences

TOOLS

Git, GitHub, Postman, ADB, Logcat

Education

MCA — Master of Computer Applications

Mangalayatan University
Pursuing — 2025–2027

BCA — Bachelor of Computer Applications

R.S.S Science College
Completed — 2023

Intermediate — Science (Math)

R.N.T.S College
Completed — 2020

Soft Skills

- Problem-Solving & Decision-Making
- Analytical & Strategic Thinking
- Adaptability & Quick Learning
- Attention to Detail

Language

Hindi

English

Bhojpuri

About Me

Android and backend developer with a habit of shipping things all the way to production. Built and published **independent Android and React Native apps** on Google Play, and built a company's **e-commerce platform** end-to-end — PHP/MySQL backend, a dozen-plus REST API modules, and live payment and shipping integrations. Prefers owning a product end-to-end, from database to UI, over working just one layer of it.

Work Experience

Green Mounts Ventures Pvt. Ltd. — Delhi, India

Jul 2025 – Present

WEB & ANDROID DEVELOPER

- Built the company's **e-commerce website** end-to-end in **PHP/MySQL** — product catalog, cart, checkout, coupons, wishlist, reviews, and order tracking
- Built the companion **e-commerce mobile app** from scratch in **React Native**, sharing the same backend as the website
- Designed and shipped **12+ REST API modules** (auth, orders, products, wallet, wishlist, coupons, referrals, subscriptions, tracking, reviews, support) consumed by both web and mobile clients
- Integrated **Razorpay** and **CCAvenue** payment gateways and the **Shiprocket API**, plus automated **PDF invoicing** and email workflows via **PHPMailer** and cron jobs
- Managed source control, deployment, and debugging with **Git/GitHub**, **Firebase**, and **Android Studio**

Freelance & Independent Developer

2023 – 2025

SELF-EMPLOYED

- Delivered **2–3 websites** for client businesses as freelance work
- Grew a personal portfolio of **30+ Android apps** (see Projects below) while self-driving skill-building in **Kotlin**, **MVVM**, and **REST APIs** — leading directly into a full-time role

Projects

Metro Saathi — Live on Google Play

React Native · TypeScript · Offline-First

Offline-first Delhi NCR metro companion, 268+ stations — route planning via a hand-built offline BFS pathfinding engine, full fare tables and live network map. [Play Store](#) · [GitHub](#)

GyaanGuru — Live on Google Play

Java · Android · Live Trivia API

Bilingual (Hindi & English) GK quiz app, 300+ offline questions plus a live trivia mode via a public API. [Play Store](#) · [GitHub](#)

#HashKit — Live on Google Play

Java · ML Kit · Security-Hardened

Instagram growth toolkit — on-device AI hashtag generation (ML Kit, zero data leaves device), reels downloader, bio generator. [Play Store](#) · [GitHub](#)

Sabka Loan — Android App

Kotlin · MVVM · Retrofit · Collaborative Project

Loan-services Android app built collaboratively with a fellow developer using MVVM and Retrofit.

+ 2 more solo Android apps on GitHub — Scientific Calculator (hand-written expression parser) & QR Code Pro

Certifications

Android Security Masterclass — PW Skills, Jul 2026

Web Hacking Workshop — PW Skills, Jun 2026

Node.js Full-Stack Workshop — PW Skills, Mar 2025

Git & GitHub Mastery — PW Skills, Mar 2025

Key Highlights

- Independently-built apps live on Google Play** with real installs and users
- Fixed a **Play Store policy rejection** by migrating to the Android **Photo Picker API**
- Hand-built an **offline route-pathfinding engine** for 268+ Delhi Metro stations
- Recovered a lost codebase from an old drive and shipped it to a **live Play Store release**, solo
